The Core Guidelines

The **C++ Core Guidelines** are a set of best practices, recommendations, and rules for coding in C++ which have been developed by Bjarne Stroustrup and hundreds of other experts in the field. These guidelines are an important part of the language, as they help users to write the best, most up-to-date C++ possible. In the next couple of videos, Bjarne will talk about the origin of the guidelines and give some advice on how to use them.

What is the Origin of the Core Guidelines?
